

SMS RESULTS

"How the SMS Results system Works"

For each team, two mobile numbers can be registered. Initially the number of the Club Secretary has been set, but if you want the Team Manager (or someone else) adding just let us know the names and mobile numbers of the two people you want to register. During each game, the FA system will send an SMS Text Message to each registered mobile number, reminding you to send in the result of the game.

After the game, **BOTH** home and away clubs should report the score by replying to their message using the word **RESULT** (followed by a space) and giving the score for the game, **home team first, away team second, and separated by a hyphen.**

For example:- You will receive a text

FULL-TIME @TheFA CHE1 v MNU1 K.O. SUN 21 SEP 2008 14:00.

Submit your result after the match as: RESULT H-A CHE1

For example to report a 2-1 win to the home side (Chelsea 1sts!) you would simply reply:

RESULT 2-1

The system will even allow you to report postponements (**RESULT P-P**) and abandonments (**RESULT A-A**), though remember you'll also need to report these to the league in the usual way.

Results should be sent by 6pm (10pm for midweek games).

Hints and Tips

If you are having problems with sending in results, please bear in mind the following:-

- Your message **must** start with **RESULT** – otherwise the message won't reach Full-Time.

- If you're registered to submit SMS results with more than one team, include the team code (Full-Time tells you if any code is required).
- Make sure you give the correct team code (if one is required) **after** the scores.
- Make sure you give the **home score first, away score second.**
- **Tell us if you change your mobile number!**
- Tell us if a fixture is incorrect on Full-Time before the game is played.

If you want to check the score has been logged, simply check the internet or the mobile internet.

Scores register within minutes.

It is essential you get the format right - the system is automated, so it's a computer taking the text and registering it. If you get it wrong, it won't understand it, but so long as it's right, it'll work perfectly.
